Evaluation or Follow-up

As we had planned, we have visited the sites having the favorable environment for the establishment of college. We were searching for a place well equipped with the facilities as well as silent and away from country crowd. Finally, we found the site which meets most of our requirements. With a little bit of touch up, this area is going to be a perfect site for a technical college.

Research work is still going on what the students of Nepal are really searching for. Research faculty has been formed who are studying on the difference between students of Nepal and the students of other countries. Knowing the difference we can see our strong points and for the rest, we can import the good qualities and create an environment for improvement.

Resources and the lab instruments were supposed to be ready by this time as per our plan but unfortunately it is still in the process. We have ordered the instruments but due to some problems it has not been delivered yet. But we are sure it is going to be ready very soon.

We have talked to some of the very renowned professor of our country and we feel very proud to say they are ready to be a part of our faculty. We have also planned to bring faculty members from other countries. For this we had held some meetings with them and the best part is they have shown us the positive response.

So , as a whole if we see, our project is going as per schedule and we hope if we continue our project in this pace , we can certainly build an institute that can compete with any institute of the world.
